

AI TEXT TO SQL PREMIUM REPORT

Database: movie_db

User Question: show all movies

Generated SQL: SELECT * FROM movies;

Explanation: This SQL query is saying: "Get me all the information (everything, denoted by *) from a table called 'movies'". In other words, it's like asking someone to fetch you everything they have about movies - the title, director, genre, release date, etc. The result would be a list of all the movies in the database.

id	name	hero	rating
1	RRR	NTR	9
2	Pushpa	Allu Arjun	8
3	RRR	NTR	9
4	RRR	NTR	9
